Private GP & Medical Clinic

“Traditional Medicine in Modern Settings”

History of Stonegate Medical

Stonegate Medical Clinic was founded by David Grabowski in 2016 with the vision of creating Patient Choice and the ability to receive truly patient centred care at times to suit them within a pleasant and relaxing environment. David is supported by Dr Aaron Brown who is the clinical lead for the clinic as well as one of the private GP team.

The idea was to provide traditional medicine giving the clinician and the patient time to comfortably carry out a consultation. Not only do we provide private GP services, but we also integrate relevant and appropriate services within the clinic to

improve access to services, especially those that may be sensitive such as mental health, or difficult to access.

Since its launch, the clinic has grown from offering routine private GP services, health screening and vaccinations to include, minor surgery, earwax removal through KlearEars, work and visa medicals, mental health services, specialist paediatric services and occupational health with more services coming online shortly including specialist neurology services, physiotherapy, aesthetics and more.

In 2018 Stonegate Medical will see growth locally with an additional clinic opening in York Nuffield hospital with further sites in Leeds to open in the year.

The key to success and growth for the company is solely based on the team, from the back of house team to our clinical team who all share the same beliefs and visions of truly patient centred care.

Clinic insight

At Stonegate, we strive to provide a high level service that compliments the NHS minimising and intentionally avoiding any strains on our NHS counterparts. Though as a private healthcare provider, our patients are entitled to pick and choose their care be it private or NHS (if they are entitled to it), around 99.9% of our patients choose to follow their care privately as per our recommendations unless in certain situations where NHS care may be the best option.

All patients are actively encouraged to share their notes from our consultations with their NHS practices which also includes QOF data. This is a service that we provide

internally and at no cost to the patients.

All pathology is carried out privately as is any diagnostics with any of the private providers locally and regionally.

Contrary to common beliefs, our patient demographic is vast and we treat patients of all ages and from all social demographic backgrounds. This is something we feel passionate about as we want our services to be easily accessible for all.

As stated, we offer a variety of services and as a clinic regularly review the services being provided and look to evaluate, improve and even introduce new services supporting our clinical team from conception to delivery. As a result we have worked with our team to develop and launch services that they may not have been able to do prior to their time at Stonegate.

Working as a Private GP at Stonegate Medical

At Stonegate we provide flexible sessions to fit in with your existing commitments be it family or work.

Our clinic is open six days a week and our team work sessions to suit them be it half day clinics, 9 to 5 style clinics or full days.

We are open on Saturday mornings and operate a rota which typically works out a Saturday morning once every six weeks. There is also the option to provide additional Saturday clinics should this fit in with your schedule.

You will see an interesting mix of patients presenting with common ailments to complex concerns. Patients typically self select from the doctor biographies which results in the team of doctors treating patients matching their particular interests as well as their routine work.

We offer comfortable clinic surroundings and an administration team who are hands on to work with you and support you at every step.

Our private GP appointments are a minimum of 20 minutes with extended consultations options available depending on the needs of the patient.

As a clinic, we hold regular meetings and actively encourage discussions between the team outside of these for anything specific, or requiring team input.

If you have a particular interest(s), we are keen to hear from you and work together to integrate this in to the services.

As a team doctor you would be contracted on a self employed basis working on a remuneration package that would be a fee share between you and the clinic. The earning potential is high with support in place to help assist new starters in to the clinic.

One of the main factors to address is your indemnity, as depending on your existing policy, you may or may not be already covered for private work. This is something that is worth considering as well as looking at comparisons from other providers, however, the clinic operates a group discount scheme with MPS which would benefit with a 10% reduction on subs. This is something that we would be able to assist you with.

The business is going through a period of growth with additional sites going live, alongside a new mentoring support network being created for other Private GPs. We see this as an exciting time to join the clinic and be apart of a service that offers great value to patients and surrounding services.

What are we looking for?

We are seeking like minded clinicians who share our beliefs and want to work in an environment that allows the flexibility and scope to provide great care to our patients.

We are looking for longterm clinicians as well locum cover providers.

As a clinic we have seen strong growth year on year and are looking for clinicians who can join the clinic to help grow and develop further.

If you would like further information, you can contact us via email: recruitment@stonegatemedical.co.uk and all enquiries are kept strictly confidential.
